

vegIMPACT Activities

vegIMPACT aims at realizing measurable impact and benefits for Indonesian vegetable farmers. However, the Program is also on learning. We develop and implement different farmer training methods: Which method is most effective? What are success and failure factors in linking farmers to markets? And what are appropriate models to collaborate with the private sector? These are some of the questions that are of relevance beyond vegIMPACT.

The activities of the vegIMPACT program are organized in six Work Packages:

- [Development of Product Market Combinations \(PMC\)](#)
- [Potatoes \(Potatoes\)](#)
- [Development of Permanent vegetable production systems \(Permveg\)](#)
- [Knowledge Transfer \(KT\)](#)
- [Occupational Health \(OH\)](#)
- [Monitoring and Evaluation \(M&E\)](#)

As part of the program organization, vegIMPACT established a Local Support Office (LSO) in Jakarta.

If you click on a work package above, you will be re-directed to a page with more information on the respective work package.
